

Elfin

Collaborative Robot

The Elfin collaborative robot can be used in automated integrated production lines, assembly, picking, welding, grinding, spraying and other applications, and has been exported to more than 100 countries and regions. It adopts a unique double-joint module design, where one motion module contains two joints to form a unique kinematic structure, which not only differs from most collaborative robots on the market, but also provides more flexibility when working.

First dual-joint module design in China

The unique kinematic design enables the robot to have high flexibility. The highly integrated modular design minimizes the arm weight.

Optimized singularity

The unique arm design not only avoids the product homogeneity, but also reduces the singularity.

Highly flexible 6-DOF collaborative robot

The collaborative robot with 4/6-axis coaxial structure has almost reached the flexibility of 7-DOF robots.

Modularity

All-in-one module of fully self-developed reducer, motor, encoder, drive and software.

Industries

Electronics Automotive Metal processing Renewable energy Education

Applications

Loading and unloading Assembly Picking and placing Welding
Palletizing Dispensing Inspecting
